C170VKK

Electric sauna heater's control unit with a week timer and a remote start system for professional use

Harvia C170VKK is an electric sauna heater's control unit for professional use. A week timer, remote start system and extensive selection of functionalities enable a versatile use of the sauna facility. Suitable for a max. 17 kW sauna heaters, and also for more powerful heaters when equipped with an additional power unit. Installation is easy.

The C170VKK is an updated version of the C150VKK control unit, which has become a classic among professionals. In addition to controlling the sauna heater, the control unit can be used to adjust the lighting in the space and manage its electronic locks and ventilation. The unit has slots for eight different programs, which enable automating settings for e.g. certain times or different users. C170VKK is a great choice for housing companies, spas, hotels and other public saunas.

- Includes the control unit, temperature sensor, temperature sensor's connection cable and instructions for use.
- Operating voltage 400 V~ 3N 50–60Hz 3x25 A
- Recommended space: width 260 x depth 150 x height 425 mm
- Easy to install in place of the C150VKK control unit

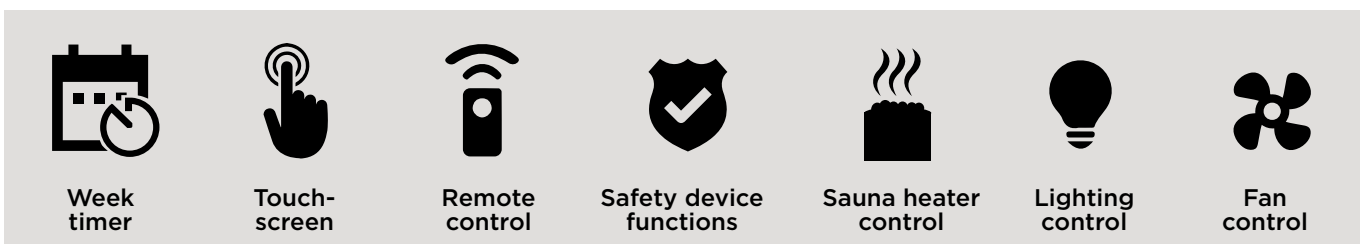

Product number:
C170400VKK

Tips for users!

- **Use the week timer to adjust the sauna space to make it perfect for various sauna shifts.** Use the week timer to adjust the sauna room to make it perfect for various sauna shifts. You can set the temperature based on the sauna's purpose of use to 40–110 degrees Celsius.
- **Monitor the sauna use from your touchscreen.** The control unit's screen shows you all the necessary data, such as the sauna's current temperature and the starting time of the next shift.
- **Utilise the drying function to increase the sauna's service life.** At the end of the sauna shift, the drying function will keep the fans and the sauna heater on for a moment to allow moisture to leave the sauna before the next shift.
- **Proactive maintenance.** You can use the maintenance menu to monitor the time between maintenance visits and the device's total hours of use.
- **You can reset the maintenance counter at the end of a maintenance visit.** This function is very useful for proactive maintenance, such as deep cleaning the sauna and the heater, changing the sauna stones or replacing the heating elements.
- **Ensure reliable operations with two temperature sensors.** We recommend the use of an additional sensor especially if the ventilation channel is close to the sauna heater's main sensor or if the heater is next to a door. An additional sensor is an accessory.

A wide range of functions for using sauna facilities
